Every page gets the expensive read

A premium LLM judges every check on every page, including pages that are already correct.

TEST LIFECYCLE TODAY

Where the LLM spends its effort

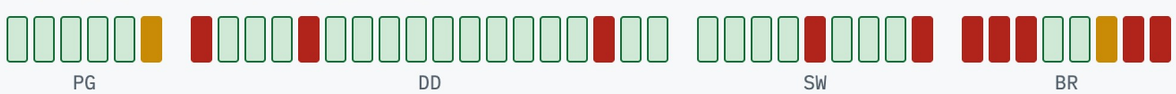

Each cell is one check on one page. The LLM reasons over all of them.

FUNCTIONAL · DEFECT-BUILD PAGE

22 of 42 checks (52%) are positives the LLM re-reads anyway.

REGRESSION · DEFECT-BUILD PAGE

29 of 41 checks (71%) are positives the LLM re-reads anyway.

REGRESSION · CLEAN BUILD

41 of 41 checks are positives. A full LLM call buys no new information.

Positive · Fail · Needs review

Functional groups: GT gate, PH placeholders, DV data values, ST static wording, LF look and feel, DC diagnostic, SV score. Regression groups: PG page, DD data values, SW static wording, BR branding.

The challenge

COST

≈ $0.065 per page*

Sonnet 4.5 reasoning tokens on every page, whether or not anything is wrong.

LATENCY

~35 s per page*

Output is written token by token, so wall time grows with the reasoning produced.

OUTPUT

Free text to parse

Verdicts arrive as prose, so code needs a parsing step before it can route them.

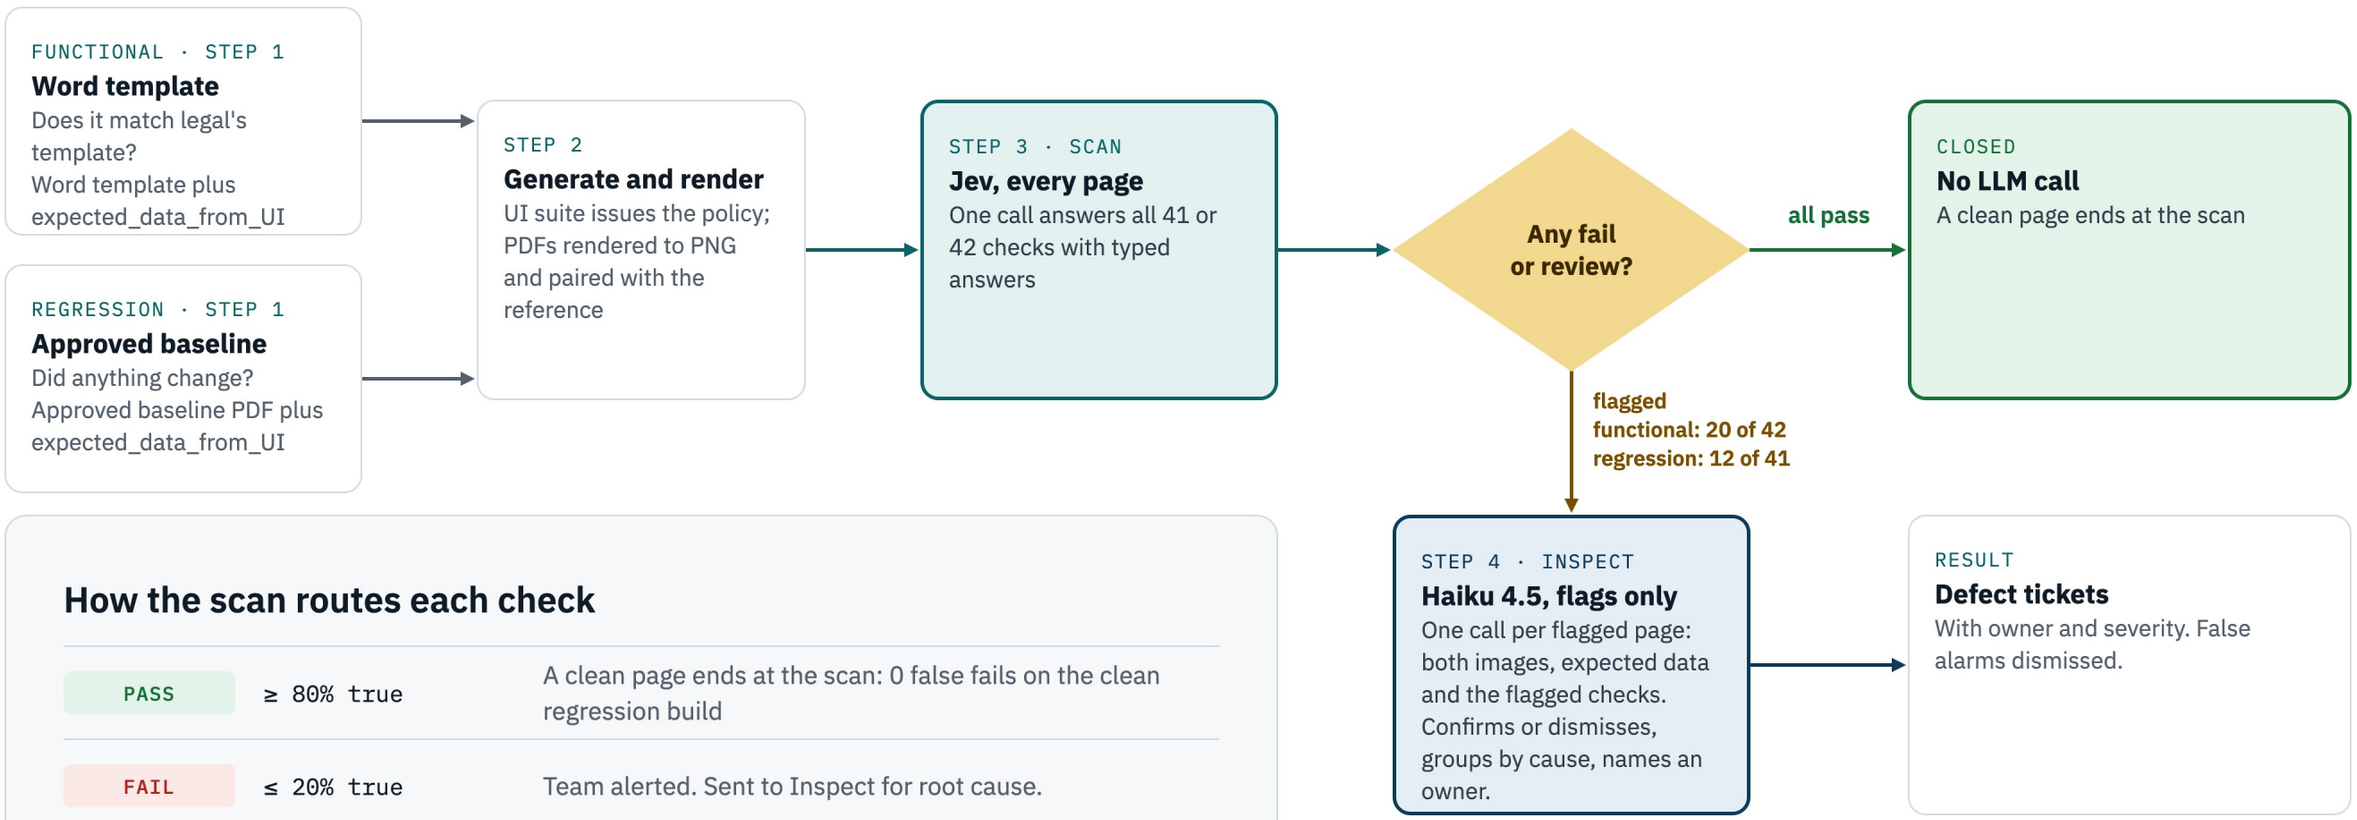

The same expensive read, whether a page has 20 defects or none.

* Assumed for illustration; replace with measured values. About 9,100 input tokens per page (from the Jev runs) plus 2,500 output tokens, at Sonnet 4.5 list price of $3 in and $15 out per million tokens; latency from about 70 output tokens per second. Full model on the proof board.

Scan everything. Inspect only what's flagged.

Two questions, one engine. Jev scans every check on every page in one call; only failed or uncertain checks reach a cheap LLM, and a clean page never does.

SAME LIFECYCLE, NEW STEPS 3 AND 4

How the scan routes each check

PASS	≥ 80% true	A clean page ends at the scan: 0 false fails on the clean regression build
FAIL	≤ 20% true	Team alerted. Sent to Inspect for root cause.
REVIEW	21–79% true	Jev cannot decide. Sent to Inspect to confirm or dismiss.
CHOICE	Unexpected option	Fails with a typed diagnosis. A split, low-confidence score goes to review.
GATE	Gate check fails	Blank, unreadable or wrong document. Page is untestable and the run stops.

WHY IT WORKS

Typed answers

Every check returns a probability, a choice or a score, so code routes on numbers, not prose.

WHY IT WORKS

Diagnosis built in

Choice checks name the defect type, such as placeholder_left or wrong_amount, before Inspect starts.

WHY IT WORKS

A cheap model, a narrow job

Haiku 4.5 sees both images, the expected data and only the flagged checks: confirm, group, assign.

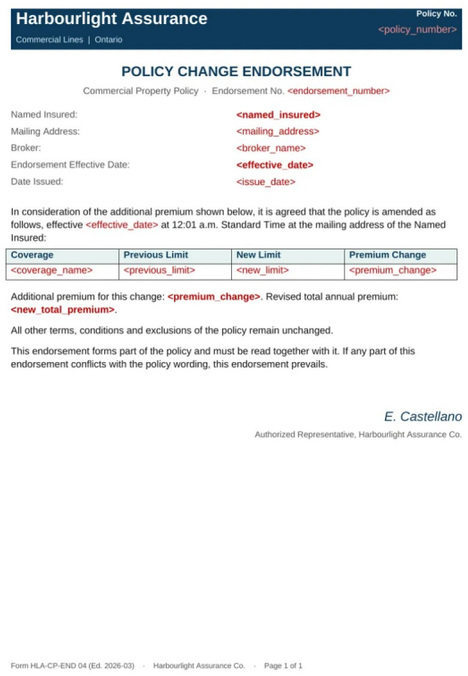

Haiku 4.5 is listed as a legacy model; Haiku 5.5 is its listed replacement.

The scan checks a filled form against legal's template

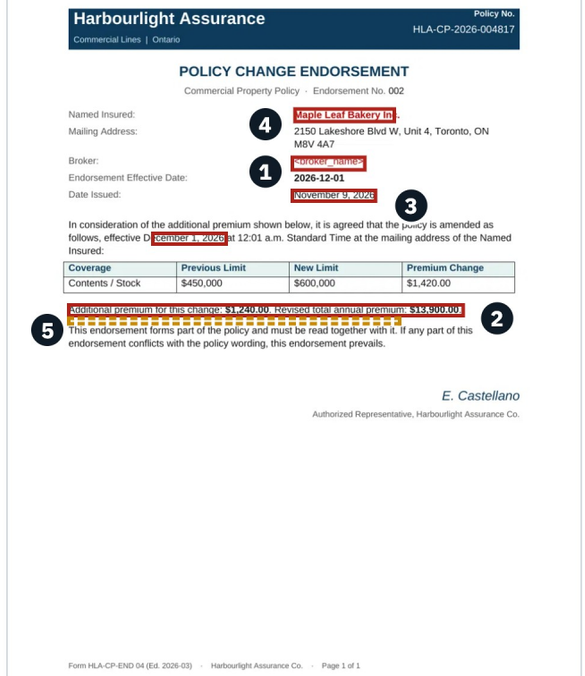

A policy change endorsement generated by the UI, compared with the Word template and the expected data. 42 checks, one call.

22 pass | **13** fail | **7** review | To Inspect **20 of 42** | **472 ms** · 9,110 input tokens

WHAT JEV SEES

`template_page`
Legal's Word template, rendered with placeholder tags

`current_page`
Generated by the UI. Numbers mark five defects; 5 is a clause that is missing.

expected_data_from_UI

`premium_change: "$1,420.00" · new_total_premium: "$13,900.00" · 10 more fields`

Jev also says why

Choice checks return the defect type, not just pass or fail.

1	dc01_broker_status	placeholder_left
2	dc02_premium_sentence_status	wrong_amount
3	dc03_effective_date_status	wrong_format
4	dc04_named_insured_status	wrong_style

Where the 42 checks go next

TODAY · ALL TO SONNET 4.5

42 of 42 checks

REVISED · FLAGS ONLY TO HAIKU 4.5

20 of 42 | **22 closed by Jev**

The 20 flagged checks are 13 fails plus 7 reviews.

PASS Is this the right form? 100%

`gt01_document_type` Choice

policy_change_endorsement 100%; unfilled_template, other_insurance_document and blank_or_unreadable 0%.

Gate passed: right form, not an unfilled template, safe to test.

FAIL Any template tags left behind? 0% true

`ph01_no_tags_left` Noul

Defect 1. The <broker_name> tag is still on the page. ph02 and ph03 fail for the same reason.

Failed automatically, team alerted. Sent to Inspect for root cause.

FAIL Does the premium sentence show the right amount? 2% true

`dv10_premium_change_sentence` Noul

Defect 2. The sentence says $1,240.00; the change table says $1,420.00. dv14_premium_consistent fails too (2%).

Failed automatically, team alerted. Sent to Inspect for root cause.

NEEDS REVIEW Is the policy number right? 70% true

`dv01_policy_number` Noul

The header reads HLA-CP-2026-004817. Jev is not sure enough to close it.

Uncertain, not decided by Jev. Sent to Inspect to confirm or dismiss.

SCORE Did the legal meaning change? 2.17 of 3

`sv01_legal_wording_impact · confidence 19%` Score

0 Identical	1 Cosmetic only	2 Reworded	3 Meaning changed
24%	2%	5%	69%

Defect 5. The "all other terms" clause is missing. On this scale, higher is worse.

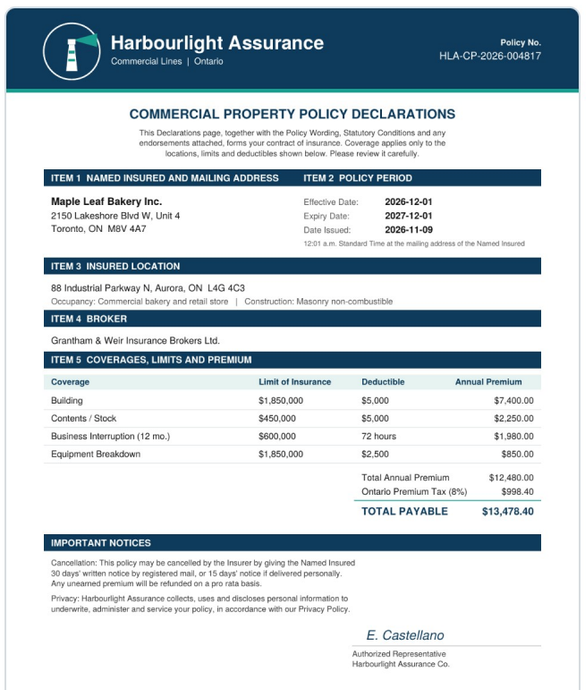

Split verdict, low confidence. Sent to Inspect.

Jev screens all 41 checks of one page in a single call

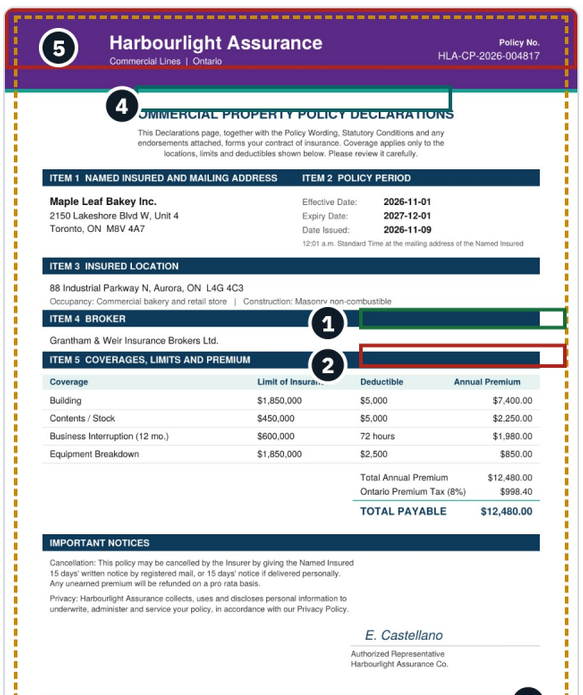

The pilot's defect build: a commercial property declarations page seeded with 6 defects, compared against its approved baseline.

29 pass | **10** fail | **2** review | To Pass 2 **12 of 41** | Clean build **41 / 41** pass

STATE · WHAT JEV SEES

baseline_page
Stable build, approved

current_page
Build under test, same inputs. Numbers match the checks on the right.

expected_data_from_UI
`premium_tax: "$998.40" · total_payable: "$13,478.40" · 11 more fields`

Where the 41 checks go next

CURRENT · ALL TO SONNET 4.5

41 of 41 checks

REVISED · FLAGS ONLY TO HAIKU 4.5

12 of 41 | **29 closed by Jev, no LLM call**

The 12 flagged checks are 10 fails plus 2 reviews. On a clean build the revised bar is empty.

1 PASS Premium tax is correct — 99% true

dd15_premium_tax — Noul

The amount next to "Ontario Premium Tax (8%)" reads exactly the expected premium tax. Expected: $998.40

Closed automatically. Not sent to Pass 2.

2 FAIL Total payable is wrong — 0% true

dd16_total_payable — Noul

The large bold amount next to "TOTAL PAYABLE" reads exactly the expected total. Expected: $13,478.40

Failed automatically, team alerted. Sent to Pass 2 for root cause.

3 NEEDS REVIEW Did the layout shift? — 71% true

br06_layout_alignment — Noul

Ignoring the logo and header band, every section sits in the same position and alignment as in the baseline page.

Uncertain, not decided by Jev. Sent to Pass 2 to confirm or dismiss.

4 CHOICE Which document is this? — 100%

pg01_page_type — Choice

Picks one option from a list, with a probability for each. **commercial_property_declarations 100%**; endorsement, billing_notice and other 0%.

Gate passed: right page, safe to test.

5 SCORE How on-brand is the page? — 1.02 of 4

br07_brand_consistency — Score

4 Identical	3 Minor	2 Noticeable	1 Major	0 Unrecognizable
0%	0%	3%	95%	2%

Fail: 1.02 is below 2. The logo is gone and the header is purple. Sent to Pass 2.

Only the flags reach the cheap LLM

The same second pass serves both tests. It receives the flagged checks, confirms or dismisses each, groups them by root cause and names an owner. It does not re-audit the page.

FUNCTIONAL · INSPECT

20 flags become 5 tickets

Each ticket groups checks that share a cause and names the owning team.

20 of 42 checks flagged → Haiku 4.5, one call

```
{
  "flagged_checks": [ ph01, dv05, dc01, ... ],   // 20
  "state": [ template, generated_page ],
  "expected_data_from_UI": { ... },
  "task": "confirm or dismiss, say what differs,
           group by cause, name the owner"
}
```

What comes back

ILLUSTRATIVE

1. **Broker not filled in** — HIGH
   dv05 · ph01 · ph02 · ph03 · dc01 · sv02
   Owner: Policy data mapping
2. **Premium sentence amount wrong** — HIGH
   dv10 · dv14 · dc02
   Owner: Policy data mapping
3. **Dates in wrong format** — MEDIUM
   dv12 · dc03
   Owner: Forms template
4. **Named insured styled as placeholder** — MEDIUM
   dc04 · lf04
   Owner: Forms template
5. **"All other terms" clause missing** — CRITICAL
   st07 · st11 · sv01
   Owner: Forms template

Dismissed as noise

dv01 policy number	70%
lf02 fonts	73%
lf03 layout order	78%
lf05 bold premium	58%

Cost* about $0.014 · latency* about 9 s · assumed 8,000 in and 1,200 out tokens. Inspect has not been run on this page yet.

REGRESSION · INSPECT

12 flags become 6 tickets

Same job on the other test: what changed against the approved baseline, and who owns it.

12 of 41 checks flagged → Haiku 4.5, one call

```
{
  "flagged_checks": [ sw05, dd16, br01, ... ],   // 12
  "state": [ baseline_pdf, current_pdf ],
  "expected_data_from_UI": { ... },
  "task": "confirm or dismiss, say what differs,
           group by cause, name the owner"
}
```

What comes back

ILLUSTRATIVE

1. **Cancellation notice period changed** — CRITICAL
   sw05 · sw09
   Owner: Forms template
2. **Total payable excludes tax** — HIGH
   dd16
   Owner: Rating
3. **Effective date wrong** — HIGH
   dd05
   Owner: Policy data mapping
4. **Insured name misspelled** — HIGH
   dd01
   Owner: Policy data mapping
5. **Logo missing** — MEDIUM
   br01 · br02 · br07 · br08
   Owner: Forms template
6. **Header colour off-brand** — MEDIUM
   br03 · br07 · br08
   Owner: Forms template

Dismissed as noise

br06 footer branding	71%
pg06 page layout	64%

Cost* about $0.011 · latency* about 6 s · assumed 7,000 in and 800 out tokens. On the clean build nothing is flagged, so Inspect never runs.

* Assumed tokens at list price. Haiku 4.5 is listed as a legacy model; Haiku 5.5 is its listed replacement. Tickets and dismissals are illustrative: they map the real Jev flags to likely causes, and Inspect has not been run.

Follow three pages

Each page takes two routes: today's read by Sonnet 4.5, and scan-then-inspect. Bars share one scale, so the gap you see is the gap you pay.

Today · Sonnet 4.5 on every check Scan · Jev Inspect · Haiku 4.5

THE PAGE	COST PER PAGE*	TIME PER PAGE*
 REGRESSION · CLEAN BUILD **Nothing is wrong** 41 of 41 checks pass at the scan. Scan → Closed	TODAY $0.065* REVISED $0.0004 · 99% lower	TODAY ~35 s* REVISED ≈ 1.4 s · ≈ 25× faster*
 REGRESSION · DEFECT BUILD **Six defects seeded** 12 of 41 flagged; 2 false alarms dismissed*. Scan → Inspect → 6 tickets	TODAY $0.065* REVISED $0.011* · 82% lower	TODAY ~35 s* REVISED ≈ 7 s* · ≈ 5× faster*
 FUNCTIONAL · DEFECT BUILD **Five defects found** 20 of 42 flagged; 4 false alarms dismissed*. Scan → Inspect → 5 tickets	TODAY $0.065* REVISED $0.014* · 78% lower	TODAY ~35 s* REVISED ≈ 9.5 s* · ≈ 4× faster*

Cost follows the defects, not the page count.

A clean page costs almost nothing. A page with defects costs a fraction of one Sonnet read, because Inspect reads only the flags.

* Assumed for illustration; Inspect results are illustrative. Measured: Jev call time (1.35 s regression, 0.47 s functional) and tokens (about 9,100 per page). Assumptions on the proof board.

What we measured, and what we assumed

Savings are modelled at list prices. Every number below is tagged measured, list price or assumed, so you can swap in your own.

Regression pilot

MEASURED

6 / 6
seeded defects caught: name, date, total, clause wording, header colour, logo

0 / 41
false fails on the clean build. Lowest clean score was 82%

0.1–2.9 s
per Jev call: both page images, expected values, 41 questions

9,058
input tokens per page, about $0.0004 at Jev's list price

Functional run

MEASURED

42 in 0.47 s
checks answered in one Jev call against the template and expected data

9,110
input tokens for the page, about $0.0004 at Jev's list price

5 / 5
defects visible on the page were flagged (as read from the page)

20 of 42
checks flagged: 13 fail, 7 review. The other 22 closed at the scan

Cost per 1,000 pages*

MODELLED

Depends on how many pages have at least one failed or uncertain check. Pick your own rate.

SCENARIO	REGRESSION-STYLE FLAGGED PAGE ($0.0114)	FUNCTIONAL-STYLE FLAGGED PAGE ($0.0144)
Today: every page to Sonnet 4.5	**$64.67**	**$64.83**
Revised: 5% of pages flagged	**$0.93** · **98.6% lower**	**$1.08** · **98.3% lower**
Revised: 25% of pages flagged	**$3.13** · **95.2% lower**	**$3.88** · **94.0% lower**
Revised: every page flagged (worst case)	**$11.38** · **82.4% lower**	**$14.38** · **77.8% lower**

Flag rates are illustrative. Even when every page is flagged, the revised route stays well under a full Sonnet read.

Inputs behind every number

Swap any assumed value for a measured one and the savings move with it.

INPUT	VALUE	BASIS
Sonnet 4.5 price	$3 input / $15 output per million tokens	LIST PRICE
Haiku 4.5 price	$1 input / $5 output per million tokens. Listed as legacy; Haiku 5.5 is the listed replacement	LIST PRICE
Jev price	$0.042 per million input tokens, so about $0.0004 per page. The functional call also reports 1,074 output tokens; the pilot notes say Jev bills input only	LIST PRICE
Jev tokens and latency	Regression: 9,058 input, 1,353 ms (pilot range 0.1–2.9 s). Functional: 9,110 input, 472 ms	MEASURED
Today: Sonnet 4.5 per page	About 9,100 input (same payload as Jev) and 2,500 output tokens: about $0.027 + $0.0375 = $0.065. Latency: 2,500 tokens at about 70 per second, about 35 s	ASSUMED
Revised: Haiku 4.5, regression page	7,000 input and 800 output tokens: $0.007 + $0.004 = $0.011; with Jev, $0.0114. Latency about 6 s	ASSUMED
Revised: Haiku 4.5, functional page	8,000 input and 1,200 output tokens for 20 flags: $0.008 + $0.006 = $0.014; with Jev, $0.0144. Latency about 9 s	ASSUMED
Inspect results	The tickets and dismissals on the Inspect board are illustrative. Inspect has not been run	ILLUSTRATIVE
Clean-form functional run	Not yet run. The 0 false fails result comes from the regression pilot only	TO DO
Not applied to either side	Batch API (50% off input and output) and prompt caching. Both would lower the LLM cost of each approach	EXCLUDED

Sources: Anthropic pricing and Haiku 4.5 overview (retrieved Nov 2026); Jev figures from the team's regression pilot and the functional Jev response.

APPENDIX · FUNCTIONAL RUN

All 42 questions answered in a single request

The full Jev response for the generated endorsement. Every question is evaluated on its own against the same state (template, generated page, expected data), so adding questions barely changes response time.

1	42	2	472 ms	9,110
request for the page	questions: 35 Noul, 5 Choice, 2 Score	images in the state	evaluation time	input tokens

Response · jev-1.14.0
